CSC 345-01  
Project 3 - discussion.pdf  
April 14, 2019

March 22

- 11:00pm-12:30pm - discussed online
  - made shared google drive folder with required files downloaded from canvas (BACKING\_STORE.bin, addresses.txt, correct.txt)
  - made Makefile
  - set up headers in files (main.c and main\_pr.c)
  - set up report and discussion files to be edited
  - read over the project file to understand the task

April 8th

- 11:00-12:00 → discussed together in the stud and online
  - read in the logical addresses from addresses.txt
  - worked on generating the page number and offset from the logical address that was read in

April 9th

- 9:30pm - 12:00pm → met in the stud/STEM
  - discussed what we had worked on on our own at home and explained our code implementation
  - Josh reviewed what you had discussed when he had viseted your office hours
  - combined code into one coherent program to work on one copy together

April 11th

- 12:30pm-1:00 pm → met in stud/STEM
  - worked on getting input from backing\_store.bin to successfully generate values to be read into out3.txt
  - successfully generated correct values for all three out.txt files
  - began working on TLB implementation
- individually worked on code at home to discuss when meeting on campus the following day

April 12th

- 12:00pm - 1:15pm

- met up to finalize TLB implementation
- began working on main\_pr.c to implement page replacement

April 14th

- 11:00am-12:00pm → communicated through discord
  - worked on page replacement and debugging
- 3:20pm-6:20pm → communicated through discord
  - worked on page replacement and debugging
- 10:00-11:30pm → communicated through discord
  - worked on page replacement and debugging
  - finalized report.pdf and discussion.pdf
